## 5A Low Dropout Positive Voltage Regulator

TO-220

TO-263

TO-252

Pin assignment:

1. Ground / Adj
2. Output
3. Input

**Low Dropout Voltage 1.3V max.**

### General Description

The TS1084 Series are high performance positive voltage regulators are designed for use in applications requiring low dropout performance at full rated current, Additionally, the PJ1084 Series provides excellent regulation over variations due to changes in line, load and temperature. Outstanding features include low dropout performance at rated current, fast transient response, internal current limiting and thermal shutdown protection of the output device. The TS1084 Series are three terminal regulators with fixed and adjustable voltage options available in popular packages.

This series is offered in 3-pin TO-263, TO-220 and TO-252 package.

### Features

- ◇ Low dropout performance 1.3V max.
- ◇ Full current rating over line and temperature.
- ◇ Fast transient response
- ◇  $\pm 2\%$  Total output regulation over line, load and temperature
- ◇ Adjust pin current max  $90\mu\text{A}$  over temperature
- ◇ Line regulation typical 0.015%.
- ◇ Load regulation typical 0.05%.
- ◇ Fixed/adjustable output voltage
- ◇ TO-220, TO-263 and TO-252 package

### Ordering Information

Part No.	Operating Temp. (Ambient)	Package
TS1084CZ-xx	-20 ~ +85 °C	TO-220
TS1084CM-xx		TO-263
TS1084CP-xx		TO-252

Note: Where xx denotes voltage option, available are 5.0V, 3.3V and 2.5V. Leave blank for adjustable version. Contact factory for additional voltage options.

Note 1: See thermal regulation specification for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/18" from the package.

Note 2: Line and load regulation are guaranteed up to the maximum power dissipation of 15W. Power dissipation is determined by the input / output voltage difference and the output current. Guaranteed maximum power dissipation will not be available over the full input / output voltage range.

Note 3: Quiescent current is defined as the minimum output current required to maintain the regulation.

### Typical Application Circuit

**Fixed output voltage version**

$$V_{out} = V_{ref} * (1 + R2 / R1)$$

\*  $C_{in}$  is requested if regulator is located Far from power supply filter

\*\* Design  $C_{out}$  as close to  $V_{out}$  pin as possible

**Adjustable output voltage version**
